# Green Bond European Investor Survey

27<sup>th</sup> November 2019

Caroline Harrison, Miguel Almeida

Prepared by the Climate Bonds Initiative, with analysis support from Henley Business School.  
Sponsored by Luxembourg Stock Exchange, Credit Suisse, Danske Bank and Lyxor Asset Management.

Adobe Acrobat  
Document

## About the survey

- Climate Bonds Initiative's **first** green bond investor survey. Main goal was to **identify ways to scale and accelerate green bond issuance**
- Targeted **Europe-based investors** as Europe appears to have the most established pool of dedicated green bond and ESG asset managers
- Surveyed 48 of the **largest Europe-based fixed income asset managers** – combined AuM of EUR13.7tn, of which EUR4.3tn is fixed income
- **Global green bond treasurer survey** is underway

### Response rate suggests differing commitment by region

# Smaller investors have higher green bond holdings

Respondents in the lowest AuM tercile tend to have a larger proportion of green bond holdings

## Key finding 1: Lack of adequate green bond supply

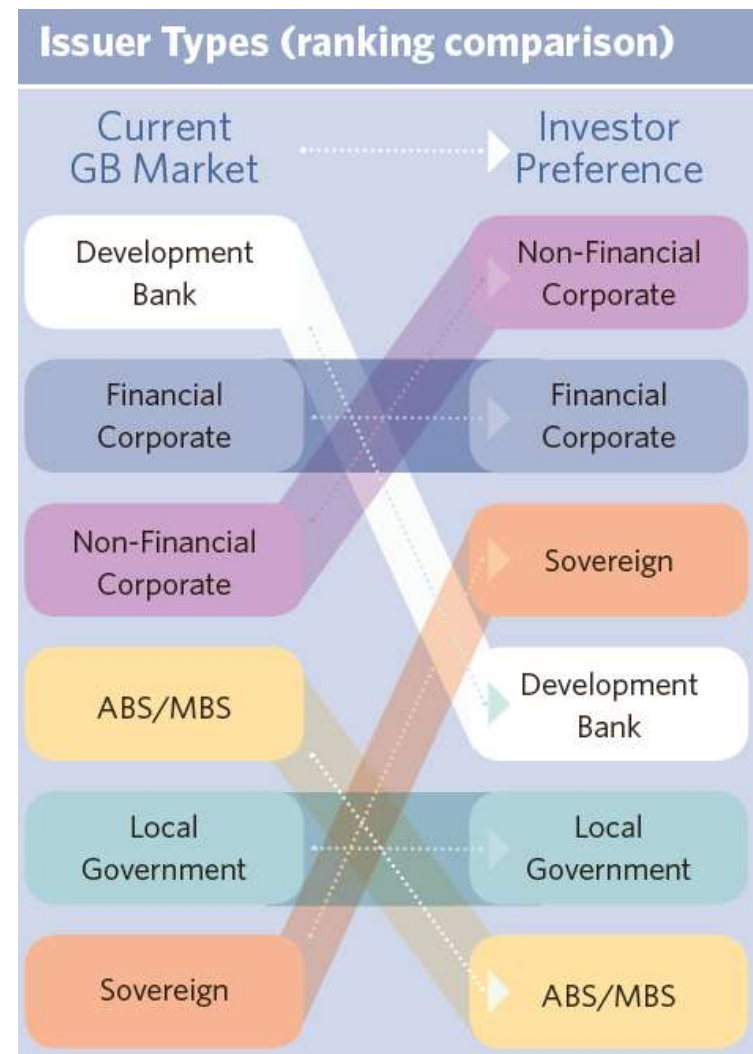

- **Strong investor appetite for green bonds:** Respondents consistently expressed demand for more bonds from more issuers in more sectors
- **64% said they prefer green bonds where available and competitively priced** (over vanilla equivalents), and almost half have specific fund(s)

### Two thirds prefer green bonds where available and competitively priced

## Key finding 2: Corporates and sovereigns are most demanded

- **Mismatch between investor preference** for different issuer types and their **share of the green bond market**
- **Non-financial corporates and sovereigns** rank far above their position in the current green bond market...
- ...while **development banks and green securitized bonds** were much less demanded

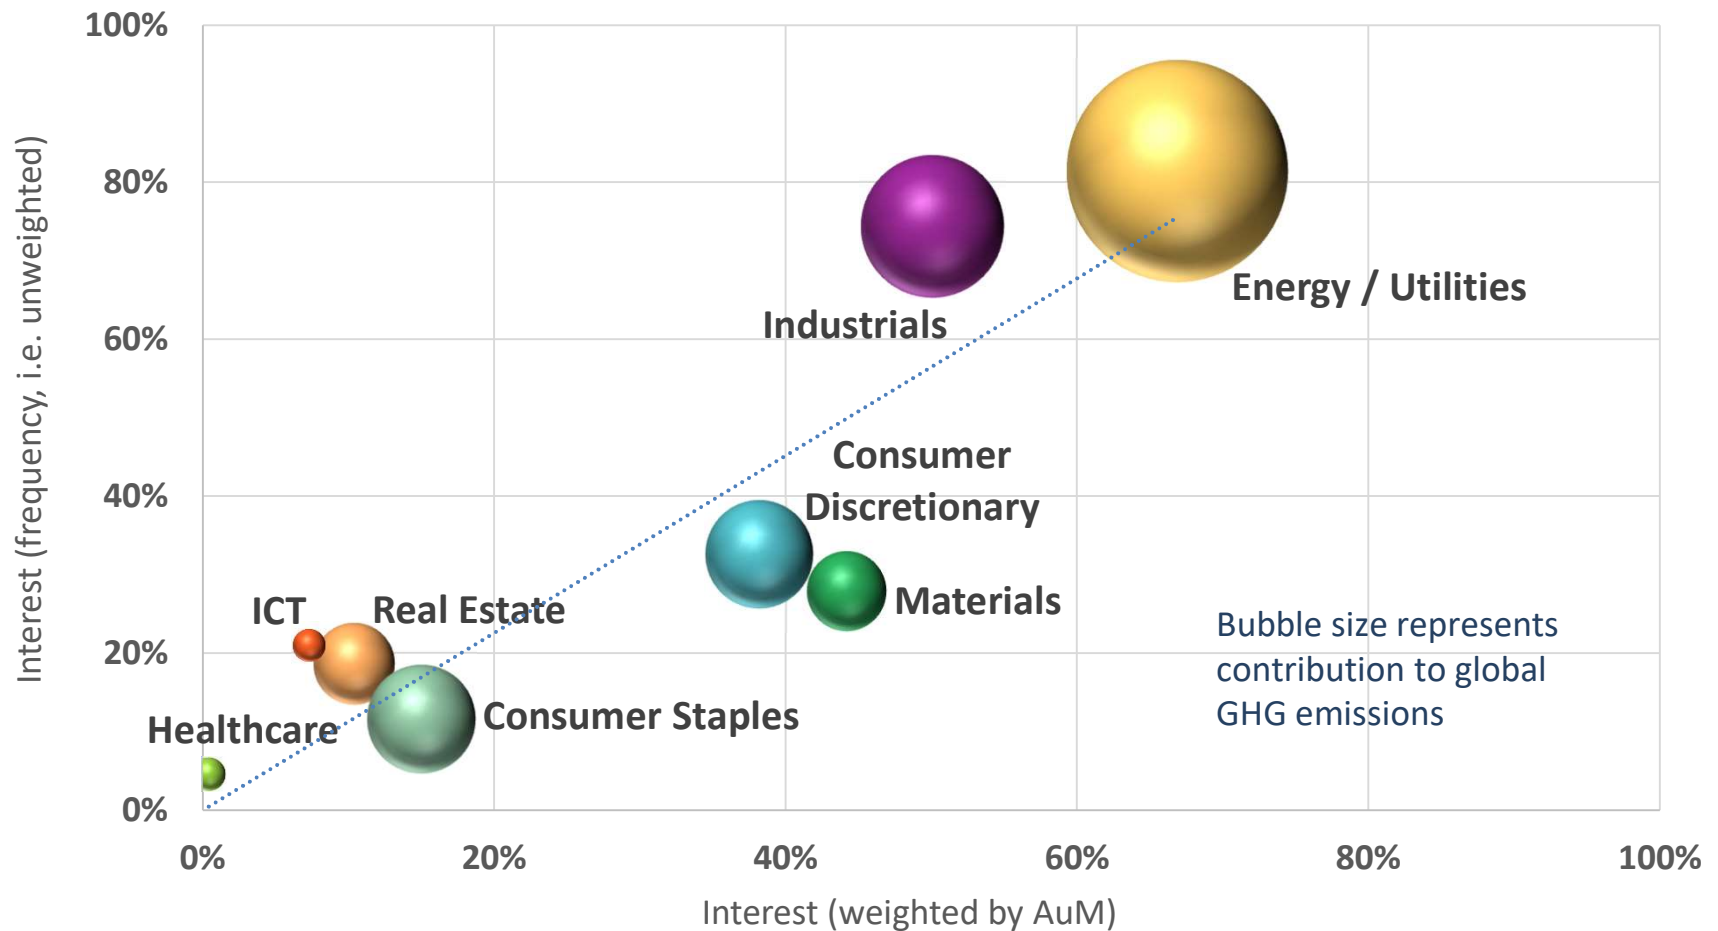

## Key finding 3: More deals from high-emission sectors

- Greater sector diversity is needed
- Industrials, Energy and Utilities, Consumer Discretionary, and Materials top sectors of interest
- Among the **top five** bond issuers in the Energy and Materials sector, none have issued green bonds to date
- The top five Utilities have issued green bonds.

Sectors (ranking comparison)		
GHG emissions	Investor Preference*	Current GB Market
Energy / Utilities 	Energy / Utilities 	Energy / Utilities 
Industrials 	Industrials 	Buildings 
Consumer Discretionary 	Consumer Discretionary 	Transport 
Consumer Staples 	Materials 	Waste 
Real Estate 	Real Estate 	Land Use / Agriculture 
Materials 	ICT 	Industry 
ICT 	Consumer Staples 	

# Positive correlation between level of interest in industry sectors with GHG emissions

# Large imbalance between emissions and current GB issuance; sovereigns can play key role, both via issuance and wider policy

## Green bonds could be leveraged to address relative sector funding gaps across the world

# Key finding 4: Green credentials and transparency highly valued

## Green credentials and pricing are the most important to decision-making

### Abbreviations:

**GCal** = green credentials at issuance, **P** = pricing, **GCpl** = green credentials post-issuance, **Min size** = minimum size of issue/liquidity, **CR** = credit rating constraints, **C** = currency preferences, **I/S** = issuer/sector constraints

## Unclear green UoP strongly affects investment decision-making

## Poor post-issuance reporting can lead to bond sale

## Key finding 5: Policy is key to scaling up green investment

Several policy mechanisms score relatively high, but none stand out particularly

### Abbreviations:

**Sta** = standardisation, **Pref LC** = preferential treatment of low-carbon assets, **Reg** = regulatory trends, **Discl** = mandatory disclosure, **Tax** = tax incentives, **Pen HC** = penalise high-carbon assets, **Subs** = subsidies

- Standardisation of definitions is a priority – preference varies but tilted towards stricter (over broader) definitions

More respondents prefer stricter definitions

- Drivers and barriers to market development: see pp. 13-14

# Emerging Markets carry additional constraints and challenges

- More green investment needed in EM
- Currency risk is a key constraint, along with credit rating and deal size

Most EM green bonds are not issued in G10 currencies

- Credit enhancements stand out as the most effective perceived tool to drive EM investment

## Conclusion: Key drivers could unlock GB market potential

- Despite several existing barriers, **respondents appear supportive**
- **Adequate policy at scale** is necessary, and must consider:
  - **Most polluting sectors**, where there is also substantial investor demand
  - **Suitability of different issuer types** given the types of project and investor preferences
- All stakeholders – issuers, investors and policymakers – must play a role in driving **greater transparency and better visibility** to support the market
  - **A platform providing aggregated information**, e.g. with standardised reporting by issuers and possibly even in open access format, could be especially powerful
- **While it is a complex problem, the solutions exist!**
  - Success will require a concerted effort by all market participants, a holistic understanding of the system, and an appropriate policy/institutional framework

**Report highlights**

- Includes 61 green bonds from 52 issuers with a combined face value of USD56.6bn issued in H1 (Q1-Q2) 2019
- EUR green bonds achieved larger book cover and greater spread compression than vanilla equivalents, on average
- USD green bonds were similar to vanilla equivalents on average
- Two thirds of green bonds in our sample priced without new issue premium
- 51% of green bonds were sold to green investors
- 201 days after pricing, green bonds tended to have tighter spreads than their benchmarks, on average
- Spotlight on EUR Utility bonds
