## **Media Release**

# California Municipal Green Bond Issuance Passes \$5 Billion New US Green Finance Record

**LONDON: 30/11/2017 13:00 GMT:** Latest Climate Bonds Initiative analysis of US municipal green bond issuance shows California has just topped \$5bn, the first state to reach the milestone and setting a new US record.

Issuance reached \$5.03bn following the close of the \$171.4mn Climate Bonds Certified Transbay Transit Centre bond for the City and County of San Francisco.

California currently leads US Municipal green issuance on bonds that have closed, followed closely by New York State on \$4.73bn, Massachusetts on \$2.83bn, Washington State at \$1.9bn, with Connecticut, Indiana, Colorado, Iowa, Illinois & Ohio all under \$1bn (Top 10 ranking below).

Green issuers have ranged from large institutions including IBank to smaller issuers such as the Trinity Public Utilities District and Midpeninsula Open Space District (Full list below).

A growing number of California issuers have also followed international best practice in gaining Climate Bonds <u>Certification</u> for their green issuance, including Bay Area Rapid Transit (<u>BART</u>), <u>SFPUC</u> and <u>Los Angeles MTA</u>.

## **State Treasurer John Chiang:**

"California has long been a national standard bearer in areas ranging from advancing civil rights to protecting our natural resources. In that same vein, the State of California and its municipalities lead the U.S. in the use of green bonds, raising more than \$5 billion in affordable capital to both curb climate change and build critical infrastructure."

"The achievement is laudable but not enough considering how the United States still lags behind Europe, Asia, and South America in taking advantage of climate-friendly green bonds to finance the conversion of a fossil-fuel based economy to a carbon-free alternative."

"I am working to change that equation by hosting a major green bonds symposium in February. I am assembling the nation's foremost experts to come up with ways to turbocharge this innovative, new market, with an eye toward unlocking its latent potential to pay for billions of dollars in investments to protect our planet from global warming."

## Justine Leigh-Bell, Director of Market Development Climate Bonds Initiative:

"Capital flows are moving in the right direction from diverse municipal issuers of every size across the state. The focus on water, energy and waste is very encouraging. The challenge now is to increase the number of green issuers across the state and encourage repeat issuance."

"Our previous data at the end of Quarter 3 had New York State in front, but California has just nudged ahead to reach the landmark \$5bn figure for municipal green bonds. The foundation is there to lead US states again and be first to reach \$10bn.

"We expect the State Treasurer's February 2018 Green Bonds Symposium and Governor Brown's Global Climate Action Summit later in 2018 will both provide sub national, national and international momentum around green investment to address climate change."
